

Grass  
**Oats, Spring**  
*Avena sativa*

## PLANT HARDINESS ZONE 6 DATASET

### COVER CROP DESCRIPTION

Does not overwinter when fall-seeded. Good weed suppressor, ok N scavenger, high forage quality. Needs good fertility for maximum benefits. Good nurse crop. Not a host for take-all disease. Mix with radish, peas. Planted early in fall, but last small grain to mature in spring. Compared to other small grains: lowest biomass, slightly lower C:N, lower tolerance for dry/wet extremes.

### GOALS

### WEEDS

### ENVIRONMENTAL TOLERANCES

PLANT HARDINESS ZONE 6 DATASET

Growth Traits

Duration	Annual
Zone Use	Common
Shape And Orientation	Erect
Dry Matter (Lbs/A/Yr)	1000 - 4000
Soil Texture	Coarse
	Fine
	Medium
Soil pH	5.3 - 8.5
Soil Moisture Use	Medium
Hessian Fly Free Date?	No
Ease Of Establishment	<div><div></div><div></div><div></div><div></div><div></div></div>
Establishes Quickly	<div><div></div><div></div><div></div><div></div><div></div></div>
Early Spring Growth	<div><div></div><div></div><div></div><div></div><div></div></div>
Flowering Trigger	
Root Depth	Medium

Soil Drainage

Planting

Seeds Per Lb	19400
Seed Price Per Lb	<div><div></div><div></div><div></div></div>
Base Seeding Rate (Lbs/A)	60 - 100
Drilled Depth	0.75" - 1.5"
Can Aerial Seed?	No
Can Frost Seed?	No
Min Germination Temp (°F)	38

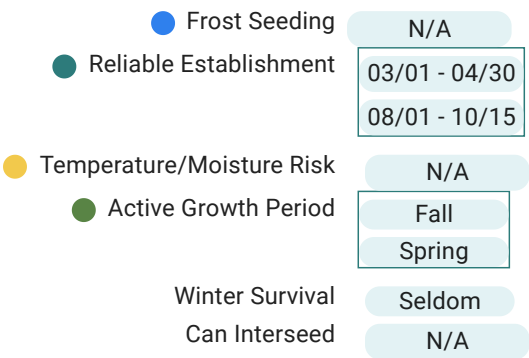

Termination

Tillage At Vegetative	<div><div></div><div></div><div></div><div></div><div></div></div>
Tillage At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>
Freezing At Vegetative	<div><div></div><div></div><div></div><div></div><div></div></div>
Freezing At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>
Chemical At Vegetative	<div><div></div><div></div><div></div><div></div><div></div></div>
Chemical At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>
Mow At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>
Roller-Crimp At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>

PLANT HARDINESS ZONE 6 DATASET

Planting and Growth Windows

Extended Comments

**Basic Agronomics:** Dry matter highly dependent on planting and termination date and precipitation. Prone to lodging in N-rich soil; decomposition depends on maturity at kill. When planted in September will grow faster than rye. If planted early enough (e.g. after peas), it creates a very good lasting residue. Bloat potential that is easily managed. Nitrate testing of forage is recommended.

**Forage and Grazing:** Bears traffic very well when drilled.

**Disease:** Information too limited to rate P and K effect. Cleaned, bin-run seed will suffice; Non host for soybean cyst nematode and root knot nematode. Bears traffic very well when drilled. Some data suggest that oats were less effective at reducing marestalk than barley or cereal rye.

**Nematodes:** Non host for soybean cyst nematode and root knot nematode.
