

Grass  
**Triticale, Winter**  
X Triticosecale

## PLANT HARDINESS ZONE 7 DATASET

### COVER CROP DESCRIPTION

A cross between rye and wheat, with characteristics intermediate between the two. Fall growth is upright, similar to wheat, so it is slower to provide ground cover and weed suppression than rye. High biomass yield potential is slightly higher than wheat in the fall and similar to rye. Matures later than rye, a little later than wheat. Plant height at heading is shorter than rye. Therefore, spring residue is easier to manage than rye and (assuming same kill date), C:N ratio will be slightly lower than rye. Triticale feed quality is generally better than rye, but not as good as wheat (i.e. chop triticale for silage at boot stage). Does not easily sustain frost damage. Winter triticale varieties typically require vernalization (overwintering) to flower and may stay short and not produce seed if planted in the spring. Spring triticale varieties do not require vernalization (overwintering) to flower and may be less cold hardy than winter triticale varieties if planted in the fall.

PLANT HARDINESS ZONE 7 DATASET

Growth Traits

Duration	Annual
Zone Use	Common
Shape And Orientation	Erect
Dry Matter (Lbs/A/Yr)	2000 - 5000
Soil Texture	Coarse
	Medium
	Fine
Soil pH	5.5 - 8
Soil Moisture Use	Medium
Hessian Fly Free Date?	No
Ease Of Establishment	<div><div></div><div></div><div></div><div></div><div></div></div>
Establishes Quickly	<div><div></div><div></div><div></div><div></div><div></div></div>
Early Spring Growth	<div><div></div><div></div><div></div><div></div><div></div></div>
Flowering Trigger	Vernalization
Root Depth	Medium

Soil Drainage

Planting

Seeds Per Lb	12000
Seed Price Per Lb	\$ \$ \$
Base Seeding Rate (Lbs/A)	40 - 90
Drilled Depth	0.75" - 1.5"
Can Aerial Seed?	Yes
Can Frost Seed?	No
Min Germination Temp (°F)	38

Termination

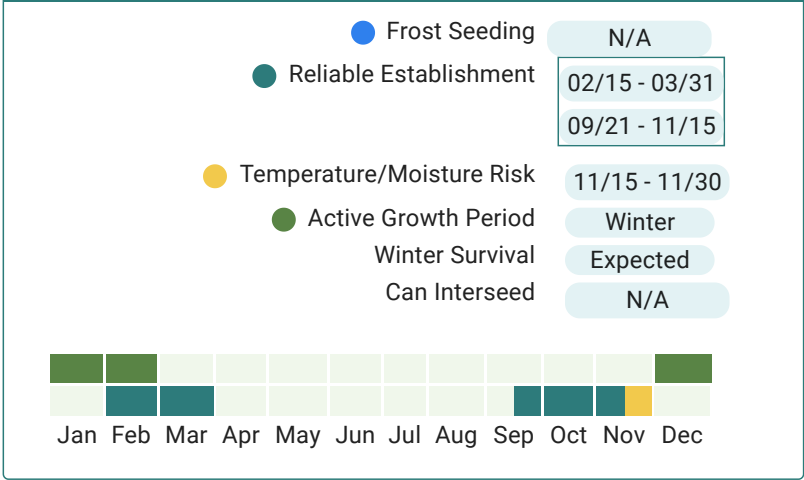

Tillage At Vegetative	<div><div></div><div></div><div></div><div></div><div></div></div>
Tillage At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>
Freezing At Vegetative	<div><div></div><div></div><div></div><div></div><div></div></div>
Freezing At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>
Chemical At Vegetative	<div><div></div><div></div><div></div><div></div><div></div></div>
Chemical At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>
Mow At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>
Roller-Crimp At Flowering	<div><div></div><div></div><div></div><div></div><div></div></div>

Planting and Growth Windows

Extended Comments

**Termination:** Flowering and freezing temps unlikely to co-occur.

**Forage and Grazing:** Let it go through til May and you get decent silage yields. Not quite as high as fall rye, but spring conditions are typically better for harvest by then (2 weeks after rye is ready). Bloat risk and other animal health risks, similar to brassicas.

**Environmental Tolerances:** Does very poorly under low-N conditions like most grasses.
