

PLANT HARDINESS ZONE 7 DATASET

COVER CROP DESCRIPTION

Low-growing summer annual. Popular summer cover crop. Needs warm conditions, but very low tolerance for drought or high heat. Prefers light to medium textured well drained soils and performs poorly on heavy, wet, or compacted soil. Fine root system good for topsoil conditioning, but not subsoiling. Purported to be good for unlocking soil phosphorus (P), but that only works in calcareous soils. Tolerant of low pH (5.0). Excellent weed suppressor at high planting rates due to very fast growth (not allelopathy). Blooms and extrafloral nectaries excellent for pollinators and other beneficial organisms. High risk of reseeding if overmature: kill or mow within 7-10 days after first bloom. Sets seed faster than all other covers - if reseeding is a concern, don't grow in mixes. Easy to kill.

Buckwheat - Bjorkman [2020]

GOALS

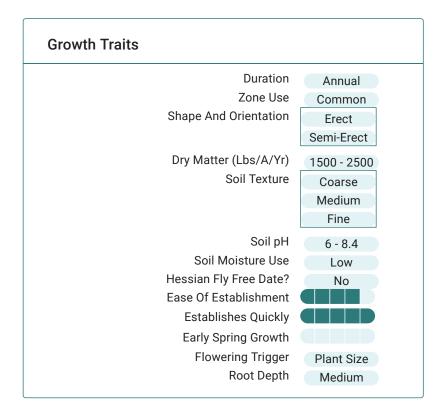

Penetrates Plow Pan **Reduces Surface Compaction** Improve Soil Organic Matter Increase Soil Aggregation **Good Grazing** Pollinator Food

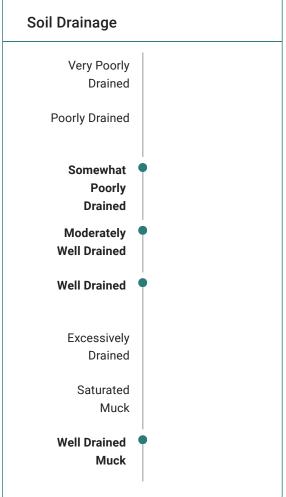

WEEDS Residue Suppresses Summer Annual Weeds **Outcompetes Summer Annual Weeds** Suppresses Winter Annual Weeds Persistence Volunteer Establishment

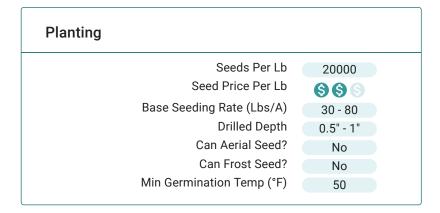

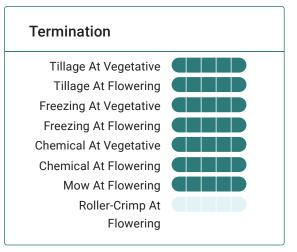

PLANT HARDINESS ZONE 7 DATASET

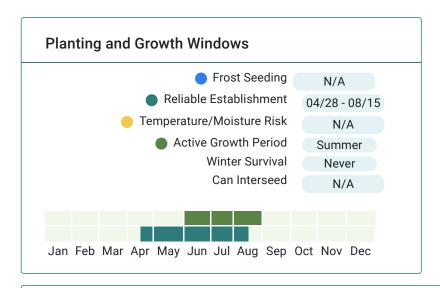

Fagopyrum esculentum

PLANT HARDINESS ZONE 7 DATASET

Extended Comments

Pollinators: Potential honey income. Top-rated cover crop for bees, along with phacelia.

Growth, Roots, and Nutrients: Minimum germination temp for competitiveness 62°F. Fine roots explore soil quickly, but are unable to penetrate compacted areas. Successful planting dates in Z5 are June and July. Mineralizes rock phosphate, but not other unavailable P.

Nematodes: Host for root-knot nematode.

Basic Agronomics: will self-seed if not terminated early in flowering

Insects: Only recently started evaluating its potential as an interplanted living mulch but casual observation suggest interplanting it with cantaloupe does not result in increased herbivore numbers in canataloupe

Termination: Terminate at first sign of flowering to avoid risk of self-seeding.

Forage and Grazing: Buckwheat causes photosensitivity and liver damage in livestock. Do not feed.

Environmental Tolerances: Does better than many species on low P soils. Does very poorly under low-N conditions like most grasses.
